WebAssembly 在云原生时代的应用

吕艺 WasmEdge

Wasm 是新一代软件隔离方案

很多边缘应用以及云应用场景也有软件隔离的需求，这些是独立于现有云计算的场景。

但是目前的隔离方案不能满足需求。

Solomon Hykes @solomonstre · Mar 28, 2019

Docker 创始人

If WASM+WASI existed in 2008, we wouldn't have needed to create Docker. That's how important it is. Webassembly on the server is the future of computing. A standardized system interface was the missing link. Let's hope WASI is up to the task!

WebAssembly (Wasm) 的特点

- 沙箱机制保证资源隔离与内存安全
- Capability-based security 保证安全地使用系统资源
- 跨平台兼容与可移植
- 比系统虚拟机或者应用容器快得多, 轻的多
- 成熟的系统扩展机制
- 支持多种编程语言 (C/C++、Rust、Swift、JS)
- 支持多种 host 环境 (Node、GO、SaaS、流处理引擎、区块链)

Wasm VS Docker

SSVM (WasmEdge) 冷启动时间不到 20 毫秒，而 Docker 需要 700 毫秒或更多。SSVM 至少快 30 倍。

<https://www.infoq.com/articles/arm-vs-x86-cloud-performance/>

所有数字表示以秒为单位的执行时间。数字越小表示性能越好。

WasmEdge: 为边缘计算优化的 Wasm 虚拟机

- 市场上最快的 WebAssembly 虚拟机
 - 比 Docker 冷启动速度快 100 倍
 - 比本地 C 代码快 10% 到 20%!
- 支持所有的 WebAssembly 扩展
- 支持访问多种主机系统功能
 - 适用于 libc 的 WASI、Tensorflow 与 AI、存储、OS 命令等
- 可以在旧版 Linux 和 RTOS 上运行
- 符合 OCI 标准 – 将可以通过 k8s 进行管理

WasmEdgeRuntime

WasmEdge 以及工具链

Language supports

ssvm-napi
WasmEdge node.js addon.

ssvm-napi-extensions
WasmEdge node.js addon with WasmEdge-storage, WasmEdge-image, and WasmEdge-tensorflow extensions.

WasmEdge-go
Golang binding with WasmEdge C API.

Tools

WasmEdge-tensorflow-tools
WasmEdge runtime executable with WasmEdge-tensorflow and WasmEdge-image extensions.

Plug-ins

WasmEdge-evmc

libwasmedge-evmc.so

EI Host Functions

WasmEdge-storage

libwasmedge-storage_c.so

Storage Host Functions

WasmEdge-image

libwasmedge-image_c.so

Image Host Functions

WasmEdge-tensorflow

libwasmedge-tensorflow_c.so
libwasmedge-tensorflowlite_c.so

TensorFlow Host Functions

Core

THE GLOBAL OPENSOURCE TECHNOLOGY CONFERENCE

编写机器人逻辑

请 [fork 这个代码仓库](#)。默认的函数是一个计算器机器人，向它发一个“2+2”的消息，它就会回答“4”。

```
use wasm_bindgen::prelude::*;
use meval;

#[wasm_bindgen]
pub fn text_received(msg: String, _username: String, _step_data: String) -> String {
    let x = meval::eval_str(&msg).unwrap();
    return format!("{}", x);
}
```

改动 [src/lib.rs](#) 这个文件，将它改为你的机器人逻辑。具体函数的写法请参见文档。

编译

将机器人的函数编译成可以部署的 WebAssembly 文件。

```
$ rustwasmc build
```

部署

参见文档创建一个飞书企业应用与 [Serverless Reactor](#) 的对应 app，将编译成功的 `pkg/calculator_lib_bg.wasm` 文件上传到 Serverless Reactor，并把生成的 service URL 提交给飞书。

WebAssembly 在云原生的应用

PaaS 的 “边缘”

WasmEdge + 流数据平台 YoMo

YoMo 是一个流数据处理平台，主要用在工厂场景。

使用 WasmEdge 来隔离执行不同工厂的 AI 推理等计算密集型

任务，满足了低时延、安全与高性能。

WebAssembly 在云原生的应用

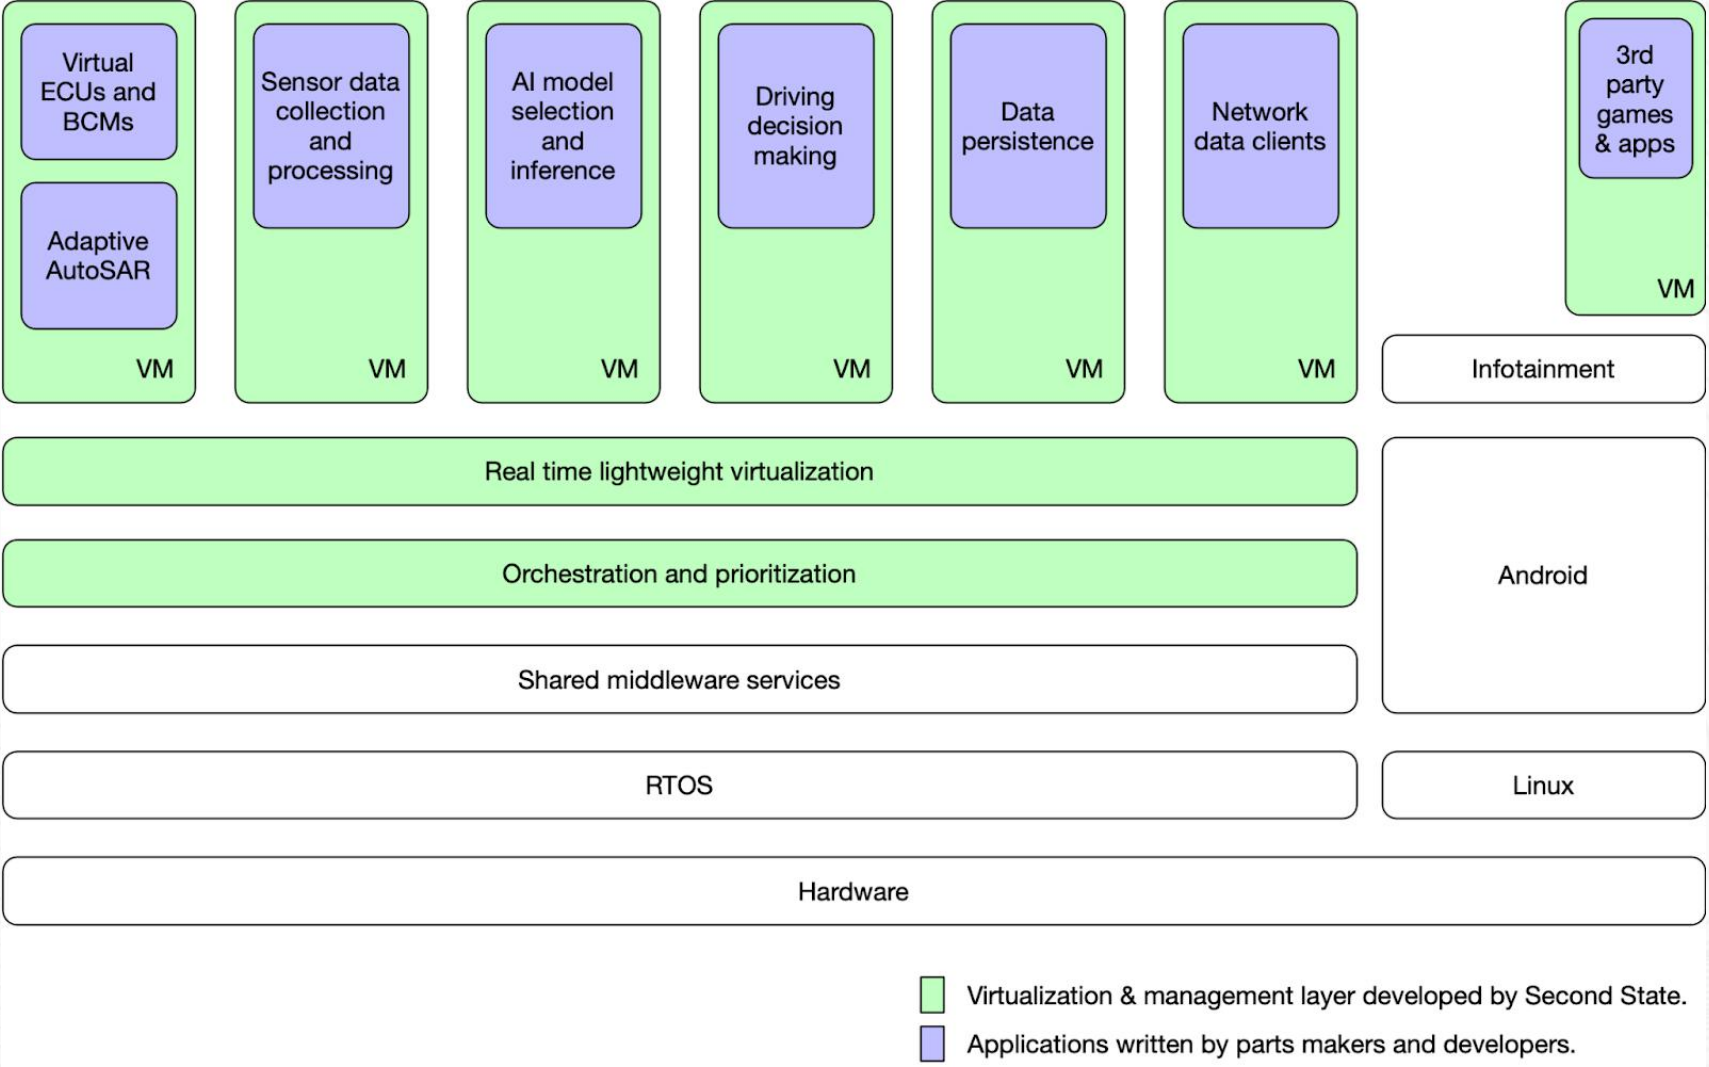

汽车-最大的边缘设备

没有实时高性能的软件沙盒让 50+ 供应商的软件跑在一辆车上

WasmEdge 让软件隔离汽车的软件

- 实时
- Small footprint
- 冷启动比 Docker 快
- 适配实时操作系统(RTOS)
- 支持 Rust、C++ 等语言

WebAssembly 在云原生的应用
